Change log

Ver- sion	Date	Author	Status	Comments
1.0	20-10-2023	JTF	Original	Original first version containing patch 4 description
1.1	26-10-2023	JSBE	Updated	Updated patch 4 description of 16 15 052 000 fix, added change log

Introduction

1

This document lists the changes released to TFE environment from September 2023 and onwards. These changes will include both descriptions of fixes for known issues, and descriptions of any new features.

Patch 4

2

2.1 Patch 4 – 25/10/23

2.1.1 Fixes

16 15 052 000: authorized presentation location

Fixed validation on the field **16 15 052 000** (location of goods/ authorisationReferenceNumber) where the authorization for a place of presentation was validated incorrectly.

- Before patch: “DKYY” followed by 9 letters and/or numbers.
Example: DKYY123456789 was valid but **is not anymore**.
- After patch: Format is “**DK**” followed by **1 to 13 numbers** for identification. Write DK followed by the authorisation number of your authorisation for the approved presentation location (godkendt frembydelsessted).
Example: DK2391217843 is format valid.

DKIPO rule for Transport Document ID

- Fixed validation, so Transport document ID and supporting document ID **does not have to contain “DKIPO”** when Authorization (12 12 000 000) = “DKIPO”.
 - The error was triggered if the following was declared:
 - Requested Procedure (11 09 001 000) = 31
 - Previous Procedure (11 09 002 000) = 51
 - Additional Procedure (11 10 001 000) = 200
 - Supporting Document ID (12 03 001 000) not starting with “DKIPO”
 - Transport document with an ID (12 05 001 000) not starting with “DKIPO”
 - A DKIPO authorisation in the field “authorisation” (12 12 000 000)

Added item codes

- Item codes 9930 27 00 and 9930 99 00 for nonfood provisions added to codelist CL152.
