

Phase 4 – Get connected

Step 2 – Register certificate

DMS Import

Onboarding mini guide for System-to-System users

Register certificate

Acquire OCES3 certificate

If you are already set up for DMS Export and Transit and assigned import rights to the same certificate as for DMS Export and Transit, then there is no need to re-register the certificate in the Certificate Portal and you can skip this step and go straight to next step.

However, if you are using different certificates or are completely new to the DMS solution, then please carry on reading this guide.

The Certificate Portal provides self-service for registration of certificates.

This section is only specified for the production environment.

The OCES certificate must be installed on the local computer before registration. For details on how to install a certificate, see appendix 8.1 Install certificate and 8.1.2 on how to add the certificate to the web-browser in the DMS Connectivity Guide or the Installation and Registration miniguide (see link in Appendix).

Register your certificate for production here: secureftpgateway.skat.dk

Onboarding process view

Register certificate

The Certificate Portal provides self-service for registration of certificates. This section is only specified for the production environment. Again, as mentioned in prior step, you can reuse the certificate for DMS Import if you have a tested one on production for Export and transit. Then you do not have to register that certificate again.

In this example, multiple certificates have been imported to the browser.

Here we select the MitID Erhverv test certificate with the UUID we have put into the Customer Portal for the technical onboarding team (Phase 2 Step 1). You enter the logon page of the certificate portal by clicking 'OK'.

Get the right roles and rights for TFE via Customer Portal

Phase 4

Register certificate on Certificate Portal AS4 - TFE

Step 2

Testing network connection DMS

Register certificate

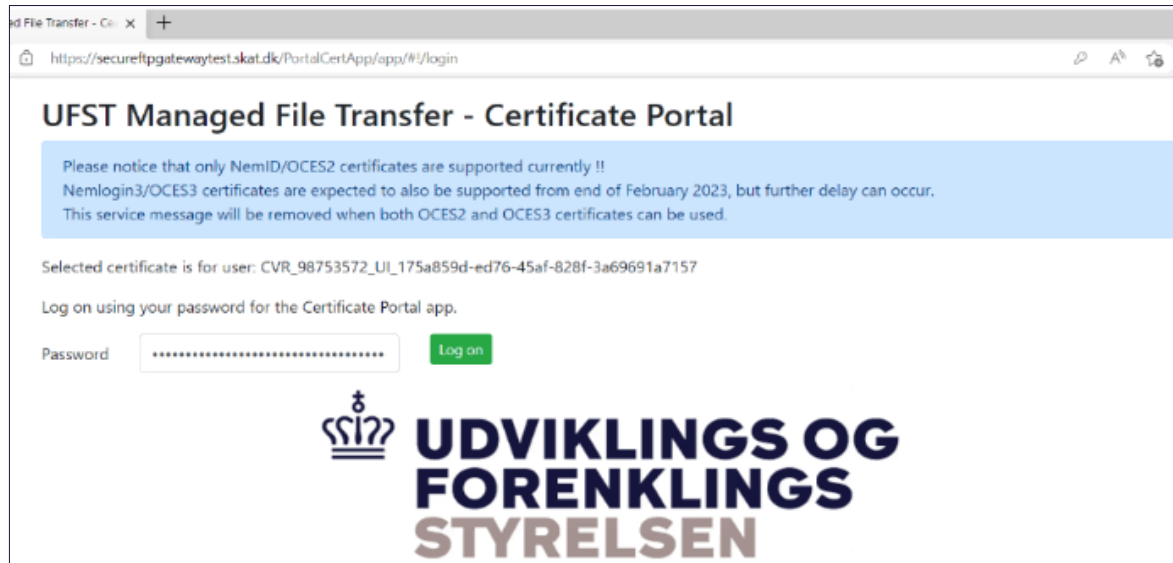

The CVR and UUID information is extracted from the certificate.
In this example, the user is:

CVR_98753572_UI_175a859d-ed76-45af-828f-3a69691a7157
but your user will of course be different.

The form of the user ID is always (CVR_8 characters _UI_36 characters)

Important: The first time you log in, the default password is your user ID. You can therefore simply copy and paste, and proceed to log in.

You will be asked to change your password in the process.

The screenshot shows a web browser window with the address bar displaying `https://secureftpgatewaytest.skat.dk/PortalCertApp/app/#!/login`. The page title is "UFST Managed File Transfer - Certificate Portal". A blue notification box states: "Please notice that only NemID/OCES2 certificates are supported currently !! Nemlogin3/OCES3 certificates are expected to also be supported from end of February 2023, but further delay can occur. This service message will be removed when both OCES2 and OCES3 certificates can be used." Below this, it says "Selected certificate is for user: CVR_98753572_UI_175a859d-ed76-45af-828f-3a69691a7157". The login instructions are "Log on using your password for the Certificate Portal app." There is a "Password" label, a text input field with masked characters, and a green "Log on" button. At the bottom is the logo for "UDVIKLINGS OG FORENKLINGS STYRELSEN".

rights for TFE via
Customer Portal

Phase 4

Register certificate on
Certificate Portal AS4 - TFE

Step 2

Testing network
connection DMS

Register certificate

At this moment, the certificate is not yet registered in the Certificate Portal. The AS4 gateway will therefore reject any logon attempt at this time.

If you lodge declarations using an SE-number and not just the CVR fill out the field “SE-number” with the SE-number used for this certificate. Otherwise leave it empty. The financial benefits of using a SE-number is no longer present, so unless you expect to use multiple systems or need to separate your import declarations from your export/transit declarations, then there is no need to use an SE number.

Proceed to press: “Register certificate”.

The registration process starts and completes in a few minutes. Press “Refresh” to verify that the registration has been completed.

UFST Managed File Transfer - Certificate/User overview	
Your certificate is not registered in UFST MFT. Press 'Register Certificate' in order to update the certificate in UFST MFT.	
Common name	dcs61-systemtest-1
Expiry date	12-06-2025
Type	CVR
E-mail	
Legal identifier	CVR_94683633

Phase 4

Register certificate on Certificate Portal AS4 - TFE

Step 2

Testing network connection DMS

Register certificate

The certificate is now registered.

Note down your username and password in a secure way. They will be used for setting up your AS4 session.

Finish by selecting “Log out”.
