

Phase 4 – Ready for production

Introduction

DMS Import

Onboarding mini guide for System-to-System users

Introduction – Phase 4

Get ready to use DMS Import in production

Now you have reached a great milestone and are on the step to use DMS Import in production. Phase 4 contains onboarding documents for you to get connected to the PRODUCTION environment. If you are an in-house developer you must set up roles and rights and setup a system user with your chosen OCES3 certificate in Tastselv Erhverv, **BEFORE** proceeding with the registration of the certificate in the Certificate Portal for production. If you are a software vendor, then please coordinate with your customers and ensure, they have completed the Tastselv Erhverv setup described in Step 1 in Phase 4, before you and/or your customer proceeds with Step 2.

This step looks a lot like phase 2, but the registration is a little different. Just follow the guides and you will get there. Through your application you already have the rights to access DMS Import for production. You now must set up the roles and assign rights for production and ensure your certificate is registered in the Certificate Portal.

Phase 4 covers:

Step 1: Configuration of roles and right in TastSelv Erhverv

Step 2: Register certificate on Certification Portal Production

Step 3: Network connection

This phase is only relevant for you if you have not already used H7 in DMS Import. We do recommend that you check your network connection as soon as possible, as this can easily be done before you start using the system.
