1 Pre-conditions

To complete the functional test case for “D2 Invalidation”, the company must have an established connection to the AS4-gateway, and have a functioning system user to DMS Transit, see [Connectivity Guide & System Guide](#).

Furthermore, ensure that you for this test case have the correct URLs, Services, and Actions, as seen below. In place of {CVR} and {UID}, fill out your own CVR and UID in the URLs below. While the URLs and Services are the same for all the test cases, the Actions however, will change depending on the test case you are performing, please keep an eye out that you have the correct Action for the test case in hand.

To submit the XML for this test case, use the following endpoint:

URL	UFE Service	TFE Service	Action
https://secureftpgatewaytest.skat.dk:6384/exchange/CVR_{CVR}_UID_{UID}	DMS.Transit2	DMS.Transit	Declaration.Submit

To submit the invalidation XML for this test case, use the following endpoint:

URL	UFE Service	TFE Service	Action
https://secureftpgatewaytest.skat.dk:6384/exchange/CVR_{CVR}_UID_{UID}	DMS.Transit2	DMS.Transit	Declaration.Invalidate

For retrieving the notification, use the following endpoint:

URL	UFE Service	TFE Service	Action
https://secureftpgatewaytest.skat.dk:6384/exchange/CVR_{CVR}_UID_{UID}	DMS.Transit2	DMS.Transit	Notification

Please ensure that the “**Test Case – D2 Standard**” have been completed **before** you try to complete the “**Test Case – D2 Invalidation**” scenarios.

1.1 Authorisation

To be able to complete the test cases using the provided guarantees of type 0 and 1 for the test case the authorisation **C505 (CGU - Comprehensive Guarantee)** is required. This is a “Comprehensive Guarantee” for customs transit including possible reduction or exemption. Formal name is *Authorisation for the provision of a comprehensive guarantee, including possible reduction or waiver (Column 4a, Annex A of Delegated Regulation (EU) 2015/2446)*.

If you lack this authorization, you can use guarantees of type 2 which are single use and have a predefined office of departure and destination. Please reach out to us on Toolkit if you require any guarantees or authorisations for testing.

This testcase covers the flow for a standard procedure. If you want to test the flow for a simplified procedure, you will also require a **C521** authorisation (**ACR – Authorisation for status of authorised consignor**). However, we highly recommend that you test with the standard procedure as the simplified procedure may reach released state before you can submit the invalidation, which leads to a rejection of the invalidation.

1.2 Process flow

The process flow for a D2 Invalidation declaration can be seen in Figure 1 below:

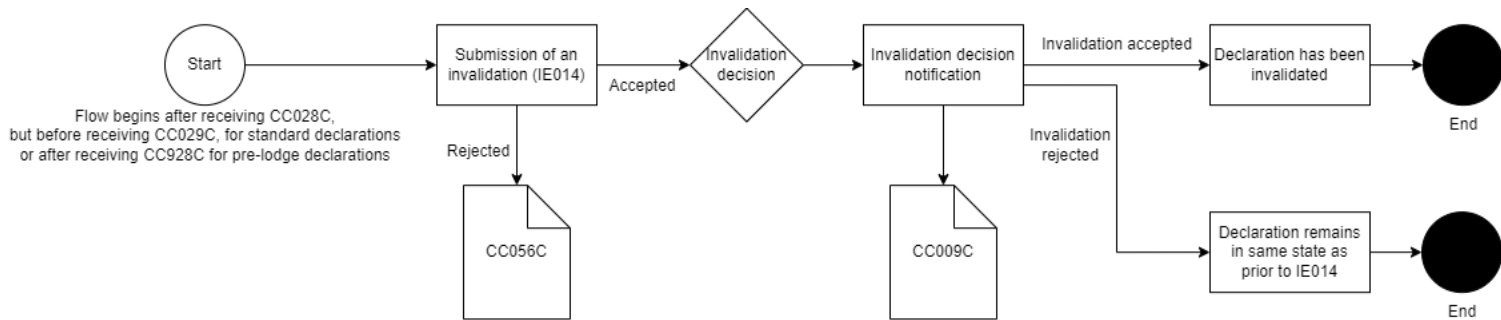

Figure 1 – Process flow for D2 Invalidation

2 Test Scenarios

To complete this test case, test scenario 1 and 2 must be passed successfully. Descriptions and specifics for each test can be found in the coming sections. Be sure to go through the scenarios thoroughly. It is recommended that you use the attached files to test the notifications.

Test no.	Test scenario	Passed/Failed
1	Submit D2 – Invalidation declaration, which is accepted	<input type="checkbox"/>
2	Submit D2 – Invalidation declaration, which is rejected	<input type="checkbox"/>

2.1 Description of test scenarios

The following sections will describe the aim of each specific scenario and provide the desired results of the test scenarios.

The purpose of the test scenarios is to ensure your connection to the system, and that you as a company can receive the correct notifications when sending in XMLs. Each step describes what you need to do when going through the test case. An XML for the D2 declaration and invalidation request is made available in the same folder where you found this test case document. This can be changed according to the test scenario. We recommend using the prepared XML(s) for this test case.

2.2 Test scenario 1 – Acceptance

The aim of this scenario is to get a notification that the D2 Standard and the subsequent D2 Invalidation XML has been accepted.

The following table shows the necessary test steps for completing this scenario as well as expected results. For the first step it is recommended using the provided declaration XML found in the **Test Case** folder. Secondly, make sure that your **LRN** is unique, and that the following fields are correctly filled with the information of your own company: **messageSender** (CVR), **LRN** (12 09 000 000)(a unique identification number), **HolderOfTheTransitProcedure** (13 07 000 000) (EORI-number), **Guarantee.guaranteeType** (99 02 001 000), **GRN** (99 03 069 000) and **accessCode** (99 03 070 000). You should use the test guarantee provided in the welcome letter. Furthermore, you should reference your company's authorisation of type C505 (CGU) in the field **Authorisation.referenceNumber** (12 12 001 000).

Step no.	Description of steps	Expected result	Passed
1	Use the provided "Test Case – D2 Standard" XML found in the test case folder (remember to replace the fields containing placeholders {{ }} and make sure (messageSender , LRN , HolderOfTheTransitProcedure , Guarantee , Authorisation.referenceNumber) they are correct for your company.	You should have the test XML ready for the next step	<input type="checkbox"/>
2	Submit the declaration using the conditions found under Pre-conditions	The declaration should be sent to the system	<input type="checkbox"/>
3	Pull the notifications	You should be able to pull notifications from the system	<input type="checkbox"/>
4	Acceptance of D2 declaration by receiving notifications CC928C and CC028C	Receive notifications CC928C and CC028C	<input type="checkbox"/>
5	A control task should be performed by a customs officer Guarantee then needs to be accepted by a customs officer	Control and Guarantee should be accepted	<input type="checkbox"/>
6	Use the provided "Test Case – D2 Invalidation" XML found in the test case folder (remember to replace the fields containing placeholders {{ }} (CVR , MRN , HolderOfTheTransitProcedure). Make sure the MRN corresponds to the MRN you received for the D2 standard declaration sent in in step 1. Check the XML with information from section 2.2.1 with the valid data ensure acceptance	Invalidation element should resemble section 2.2.1	<input type="checkbox"/>
7	Submit the invalidation XML	Invalidation XML should be submitted	<input type="checkbox"/>
8	A customs officer will then have to process the Invalidation	Invalidation is accepted	<input type="checkbox"/>
9	Pull the notifications	You should be able to pull notifications from the system	<input type="checkbox"/>

10	Receival of CC009C notification and declaration state has changed to an invalidated state	Receive CC009C and pass the test	<input type="checkbox"/>
----	--	---	--------------------------

2.2.1 XML example

Ensure that the following XML examples matches what is in your XML for this test to work.

```
<Invalidation>
  <requestDateAndTime>2023-03-16T14:27:21</requestDateAndTime>
  <initiatedByCustoms>0</initiatedByCustoms>
  <justification>I just wanted to invalidate something</justification>
</Invalidation>
```

2.3 Test scenario 2 – Rejection

The aim of this scenario is for the EO to get a notification that the D2 Invalidation XML has been rejected.

The following table shows the necessary test steps for completing this scenario as well as expected results. For the first step it is recommended using the provided declaration XML found in the **Test Case** folder. Secondly, make sure that your **LRN** is unique, and that the following fields are correctly filled with the information of your own company: **messageSender** (CVR), **LRN** (12 09 000 000)(a unique identification number), **HolderOfTheTransitProcedure** (13 07 000 000) (EORI-number), **Guarantee.guaranteeType** (99 02 001 000), **GRN** (99 03 069 000) and **accessCode** (99 03 070 000). You should use the test guarantee provided in the welcome letter. Furthermore, you should reference your company's authorisation of type C505 (CGU) in the field **Authorisation.referenceNumber** (12 12 001 000).

Step no.	Description of steps	Expected result	Passed
1	Use the provided "Test Case – D2 Standard" XML found in the test case folder (remember to replace the fields containing placeholders {{ }} and make sure messageSender , LRN , HolderOfTheTransitProcedure , Guarantee , Authorisation.referenceNumber are correct for your company.	You should have the test XML ready for the next step	<input type="checkbox"/>
2	Submit the declaration using the conditions found under Pre-conditions	The declaration should be sent to the system	<input type="checkbox"/>
3	Pull the notifications	You should be able to pull notifications from the system	<input type="checkbox"/>
4	Acceptance of D2 declaration by receiving notifications CC928C and CC028C	Receive notifications CC928C and CC028C	<input type="checkbox"/>
5	A control task should be performed by a customs officer Guarantee then needs to be accepted by a customs officer	Control and Guarantee should be accepted	<input type="checkbox"/>
6	Use the provided "Test Case – D2 Invalidation" XML found in the test case folder (remember to replace the fields containing placeholders {{ }} (CVR , MRN , HolderOfTheTransitProcedure). Make sure the MRN corresponds to the MRN you received for the D2 standard declaration sent in in step 1. Check the XML with information from section 2.3.1 with the valid data to ensure rejection	Invalidation element should resemble section 2.3.1	<input type="checkbox"/>
7	Submit the invalidation XML	Invalidation XML should be submitted	<input type="checkbox"/>
8	Pull the notifications	You should be able to pull notifications from the system	<input type="checkbox"/>
9	Receival of CC056C notification and declaration state has not changed	Receive CC056C and pass the test	<input type="checkbox"/>

2.3.1 XML example

Ensure that the following XML examples matches what is in your XML for this test to work.

```
<HolderOfTheTransitProcedure>  
  <identificationNumber>BQ2Q390LL</identificationNumber>  
</HolderOfTheTransitProcedure>
```
