Changelog- TFE

Release 4.0, Patch 4 25/10/23

Fixes

- Fixed validation on the field 16 15 052 000 (location of goods → Authorization) where the authorization for a place of presentation was validated wrongly.
    - Old validation: "DKYY" followed by 9 letters and/or numbers. Example: DKYY123456789 was valid but **is not anymore.**
    - New validation: "**DK**" followed by **two numbers** denoting the year and **1 to 13 numbers and/or letters** for identification. Example: DK23912fre43 is valid.
- Fixed validation, so Transport document ID and supporting document ID **does not have to contain "DKIPO"** when Authorization (12 12 000 000) = "DKIPO".
    - The error could be seen if the following were true:
        - Requested Procedure (11 09 001 000) = 31
        - Previous Procedure (11 09 002 000) = 51
        - Additional Procedure (11 10 001 000) = 200
        - Supporting Document ID (12 03 001 000) **not starting** with "DKIPO"
        - Transport document with an ID (12 05 001 000) **not starting** with "DKIPO"
        - A DKIPO authorisation in the field "authorisation" (12 12 000 000)
- Item codes 9930 27 00 and 9930 99 00 for nonfood provisions added to codelist CL152.
